

Call for Presentations 2010 Small Wind Conference

We are accepting proposals for presentations at the 6th Annual Small Wind Conference, June 15th and 16th, 2010, in Stevens Point, Wisconsin.

Presentations should be limited to 15 minutes, with an additional 5 minutes for Q&A. Small wind is defined as 1kW up to 100kW.

Presentation categories are not yet finalized, pending the responses we get. However, we are seeking presentations in the following areas:

- Turbine testing and results, including measurement and verification programs
- Wind resource assessment, monitoring, and siting lessons
- Case studies of installations and performance
- Case studies of installations at schools or educational institutions
- Installer issues, including successful and problem installations, and barriers encountered, and how they were resolved
- Anything else that might be of value to small wind installers, manufacturers, dealers, public benefits programs, state energy offices, or turbine owners

The preference is for “experienced based” presentations with data.

Please submit proposals to Mick Sagrillo at mick@smallwindconference.com by **February 12th**. The proposals will go to the advisory committee for discussion and decision. Decisions will be made on presentations in a few weeks so presenters have adequate time to prepare their presentations.

Presentations proposals submitted for other renewable energy conferences will be considered.

Anyone interested in sponsoring or exhibiting at the Small Wind Conference should contact Samantha at Windustry at 612-870-3474 or samantha@windustry.org
